

Childhood National Immunization Coverage Survey (CNICS)

The *Childhood National Immunization Coverage Survey (CNICS)* is now available for use by researchers at the Atlantic Research Data Centre.

The purpose of the Childhood National Immunization Coverage Survey (CNICS) is to collect information on national immunization coverage for childhood vaccines. The survey is intended to:

- Determine if children are immunized in accordance with recommended immunization schedules for publicly-funded vaccines
- Provide the World Health Organization and the Pan American Health Organization with estimates of national immunization coverage for diphtheria-pertussis-tetanus (DPT) and for measles-mumps-rubella (MMR) and other vaccines for children
- Assess knowledge, attitudes, and awareness of vaccines.
